TIPPING POINTS

On trust and digital photography – Sam put it this way – and very effectively –

Yes, but I think this is the central point of all this – that sometimes, a big enough quantitative change in the ease of doing something makes a qualitative impact on some social action. I think you see this pattern over and over. I think it's very interesting because it's going to shortly happen with human biology – so working out some of these problems now in easier terrain seems useful.
